

Nudge API Reference

The nudge creation web API returns JSON metadata about nudge and create nudge based on simple REST principles.

Requests

This Web API is based on REST principles.

Data resources are accessed via standard HTTPS requests in UTF-8 format to an API endpoint. Web API employs appropriate HTTP verbs for each action whenever possible:

METHOD	ACTION
GET	Retrieves resources
POST	Creates resources
PUT	Changes and/or replaces resources or collections
DELETE	Deletes resources

Responses

Web API responses normally include a JSON object.

Base URL:

```
/api/app/
```

Object Model:

```
{  
  type: 'type of nudge',  
  tagline: 'tagline of article or event',  
  title: 'title',  
  images []: image file,  
  schedule: (Date + Time),  
  description: 'description of nudge',  
  icon: image file,  
  invitation: 'invitation line',  
}
```

API endpoint map
